AMENDMENTS TO THE CLAIMS

1. (Previously presented) A gravity fed water purification cartridge, comprising:

an inlet head cap configured to be coupled to a prefilter, wherein said inlet head cap

provides an inlet for untreated water;

a ring member in fluid flow communication with the inlet head cap, wherein said ring

member is configured to evenly distribute the untreated water to a purification medium;

a purifier vessel in fluid flow communication with the ring member, wherein said purifier

vessel contains a polymer having pendant hydantoin groups to treat said untreated water and

provide treated water;

a bulkhead coupled to the inlet head cap and configured to separate the untreated water

from treated water;

a dwell chamber coupled to the bulkhead, wherein said dwell chamber provides residence

time for treatment of the treated water with residual halogen, and wherein the dwell chamber is

in fluid flow communication with the purifier vessel; and

an outer skin coupled to the bulkhead and enclosing the dwell chamber, wherein said

outer skin and dwell chamber provide an annular space therebetween, and wherein said outer

skin is configured to discharge said treated water.

2. (Previously presented) The cartridge of Claim 1, wherein the polymer is capable

of binding and releasing a halogen.

3. (Original) The cartridge of Claim 1, wherein the inlet head cap compresses the

ring member against the purifier vessel, and the purifier vessel is compressed against the

bulkhead to provide a sealed space.

LAW OFFICES OF CHRISTENSEN O'CONNOR JOHNSON KINDNESSPILO 1420 Fifth Avenue Suite 2800

Suite 2800 Seattle, Washington 98101 206.682.8100 4. (Previously presented) The cartridge of Claim 1, wherein the purifier vessel has a

capacity to hold about 10 to about 50 grams of the polymer.

5. (Previously presented) The cartridge of Claim 1, wherein the polymer is at least

one of a halogenated polystyrene hydantoin, a polystyrene hydantoin, a hydantoinylated

siloxane, or a halogenated hydantoinylated siloxane.

6. (Original) The cartridge of Claim 1, wherein the purifier vessel comprises a

plurality of pegs configured to transfer a compressive force induced by the inlet head cap to a

flange on the purifier vessel.

7. (Original) The cartridge of Claim 1, wherein the purifier vessel is seated on a

compressible gasket of about 20 to about 80 shore A durometer.

8. (Original) The cartridge of Claim 7, wherein the gasket is non-leaching and

suitable for drinking water applications.

9. (Original) The cartridge of Claim 1, wherein a gasket is located at the coupling of

the inlet head cap to the bulkhead.

10. (Original) The cartridge of Claim 9, wherein the gasket is substantially

incompressible.

11. (Original) The cartridge of Claim 1, wherein the dwell chamber provides a

residence time of at least about 2 to about 5 minutes.

12. (Original) The cartridge of Claim 1, wherein the annular space is configured to

hold an additional water treatment medium.

Suite 2800 Seattle, Washington 98101 206.682.8100

-3-

13. (Previously presented) The cartridge of Claim 12, wherein the additional

treatment medium includes at least one of activated carbon, mineralization materials, or heavy

metal removal agents.

14. (Original) The cartridge of Claim 1, wherein the purifier vessel, dwell chamber,

and outer skin are comprised of chlorine resistant materials.

15. (Previously presented) The cartridge of Claim 1, wherein the polymer is

configured in a bed having an aspect ratio of at least 3.

16. (Currently amended) A water purification cartridge, comprising:

an inlet member configured to provide untreated water in a first axial direction;

a ring member adjacent to said inlet member, wherein said ring member is configured to

distribute said has a base that substantially covers the opening of a purifier vessel so that

untreated water enters the purifier vessel from the sides of the opening of the purifier vessel

below the base;

a purifier vessel adjacent to said ring member, wherein said purifier vessel is configured

to treat said untreated water to provide treated water;

a bulkhead adjacent to said purifier vessel, wherein said bulkhead is configured to

separate untreated water from treated water;

a dwell chamber exterior to said purifier vessel, wherein said dwell chamber is

configured to provide treated water flow in a second axial direction opposite to the first axial

direction.

17. (Previously presented) The cartridge of Claim 16, wherein the purifier vessel

contains at least one of a halogenated polystyrene hydantoin, a polystyrene hydantoin, a

hydantoinylated siloxane, or a halogenated hydantoinylated siloxane.

18. (Original) The cartridge of Claim 17, wherein the halogen is chlorine or bromine.

19. (Original) The cartridge of Claim 16, wherein the ring member distributes

untreated water in a radial direction.

20. (Withdrawn) A gravity fed water purification system, comprising:

a prefilter interior to an untreated water container;

a water purification cartridge in fluid flow communication with the prefilter, wherein said

water purification cartridge is interior to a treated water container, wherein the untreated water

container and the treated water container are integrally coupled to prevent the entry of untreated

water into the treated water container, and wherein said cartridge contains a polymer having

pendant hydantoin groups capable of bonding and releasing a halogen.

21. (Withdrawn) The cartridge of Claim 20, wherein the water purification cartridge

comprises at least one of a halogenated polystyrene hydantoin, a polystyrene hydantoin, a

hydantoinylated siloxane, or a halogenated hydantoinylated siloxane.

22. (Withdrawn) The cartridge of Claim 20, wherein the halogen is chlorine or

bromine.

23. (Currently amended) A water purification cartridge, comprising:

a purifier vessel to treat untreated water containing at least one of a halogenated

polystyrene hydantoin, or halogenated hydantoinyl siloxane and a dwell chamber enclosed

within an outer skin, after said purifier vessel to provide residence time, wherein treated water can contact residual halogen produced from the halogenated polystyrene hydantoin or halogenated hydantoinylated siloxane, wherein the residual halogen concentration is less than 1 ppm.

- 24. (Original) The cartridge of Claim 23, wherein the halogen is chlorine or bromine.
- 25. (Previously presented) The cartridge of Claim 16, further comprising a polymer having pendant hydantoin groups, wherein said polymer provides a residual halogen concentration of less than 1 ppm.
- 26. (Previously presented) The cartridge of Claim 16, further comprising a polymer having pendant hydantoin groups, wherein said polymer provides a residual halogen concentration of 0.1 ppm to 0.5 ppm.
 - 27. (Canceled)
- 28. (Previously presented) The cartridge of Claim 23, wherein the residual halogen concentration is 0.1 to 0.5 ppm.
